Currently, I am the lead Front-End Developer who designs the appearance of a website according to client needs at Nirmala Technology company.

 $\mathsf{O}\mathsf{Z}$

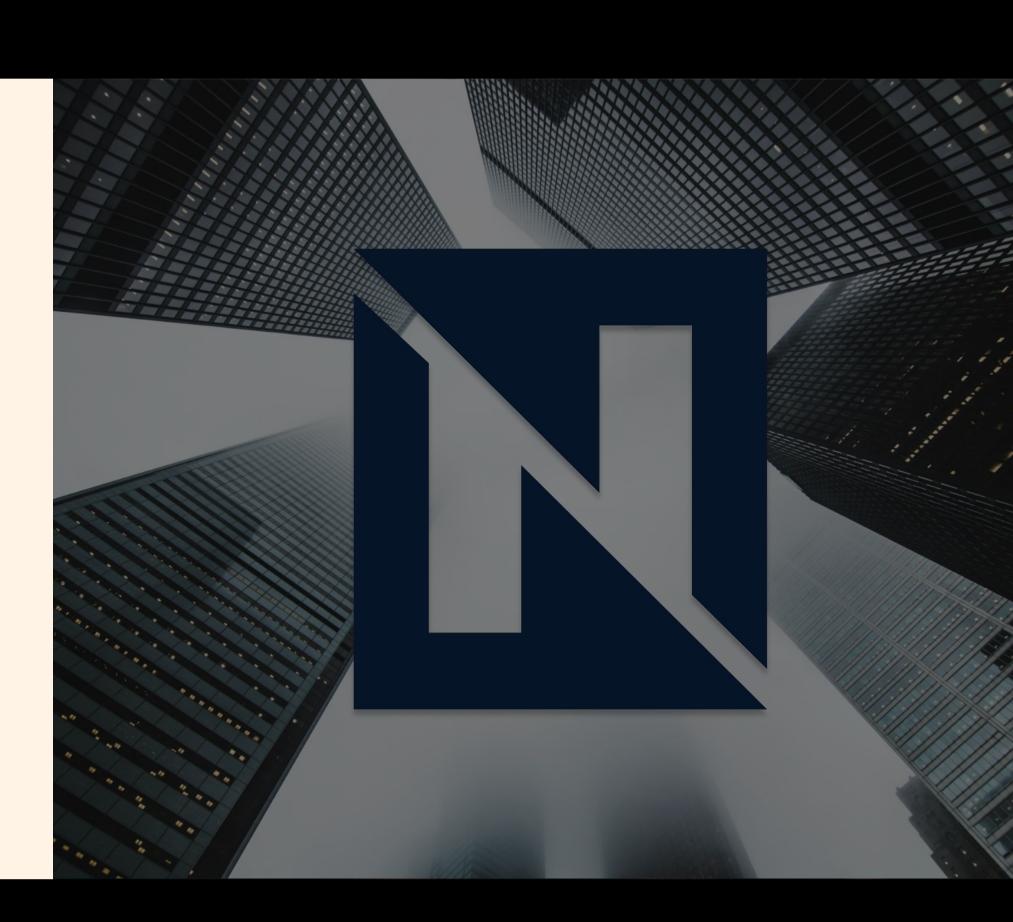

Netwok Engineer, Global Net I have been working freelance as a Network Engineer in the IT team at Global Net company for 6 months.

My Company

Nirmala Technology

Nirmatech is a technology company that focuses on developing innovative and trusted website solutions for campus environments, UMKM and. We took the name "Nirmala" from Sanskrit which means clean and holy, reflecting our commitment to keep the company away from all problems and ugliness. Our vision is to be the leading partner in the information technology industry, accelerating growth and progress for our customers.

More About my Company

Skillset

With expertise in more than 5 fields of Web, I am the right person as a Front-End Developer when it comes to a complete project. Whatever your needs are, I can assist you well.

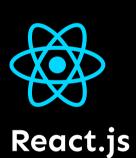

"I use Git as a terminal for work such as sending code updates, installing frameworks, and so on."

"I use Hypertext Markup Language (HTML5) for work such as designing or developing web content that I create according to the client's needs."

"I use JavaScript for work such as adding simple animation effects to complex web development, gathering user data, and more."

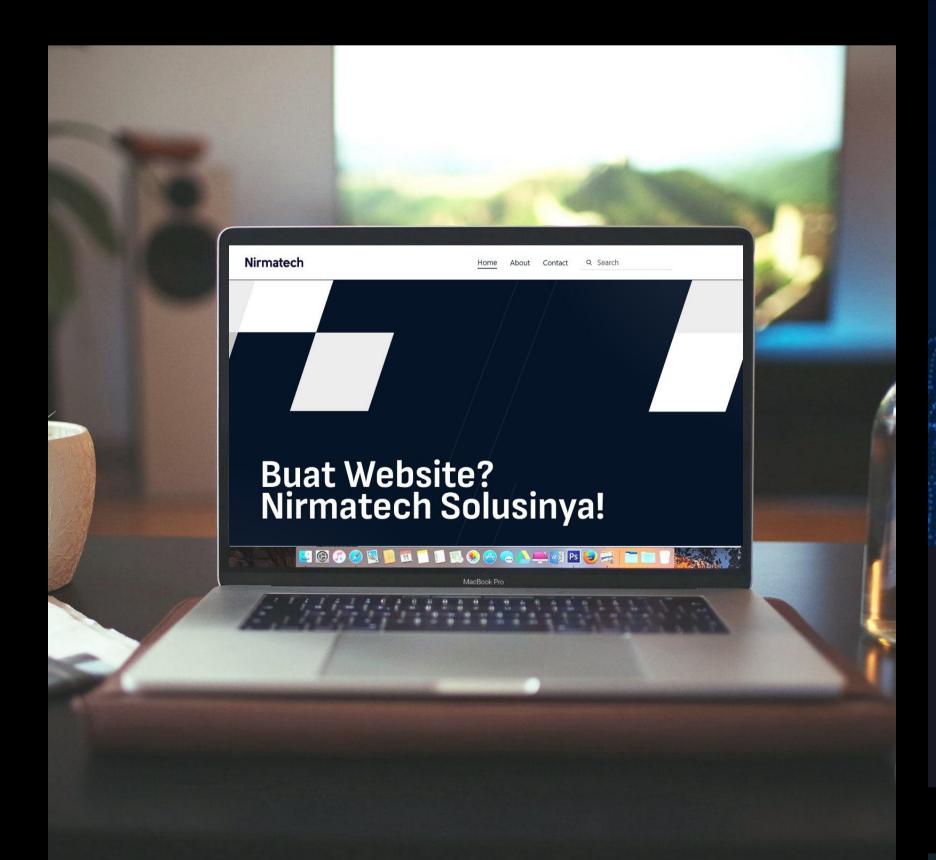

"I use Cascading Style Sheets (CSS) for work such as arranging the appearance or format of web. With CSS, I can apply styles, colors, layouts, and other effects to the web that I create."

"I use React.js for work such as building interactive and dynamic user interfaces (UI) for the web. Additionally."
